

COMPUTATIONS AND SPECULATIONS¹

by

C.A. MEREDITH

Lecturer in Mathematics, Trinity College, Dublin

edited by

A.N. PRIOR

Professor of Philosophy, University of Manchester.

¹ Editor's Note: This text is the title page and table of contents for the Meredith-Prior manuscript *Computations and Speculations*. It is kept in the Bodleian Library, Oxford, Box 8. The text has been edited, transcribed and annotated by Per Hasle. The original page breaks have been followed. All underlinings are Prior's. Further information on the manuscript, e.g. on authorship, dating and its physical state, can be found at www.priorstudies.org, cf. Box 8.

CONTENTS

	p. ²
Editor's General Introduction ³	1
I. Axiomatics of the Classical Propositional Calculus	5
I.1. Łukasiewicz's Deduction Shortened	15
I.2. Two Axioms for <u>C</u> -verum	16
I.3. 2-Axiom 2-valued <u>C</u> -pure	18
I.4. 2-Axiom 2-valued <u>C</u> -pure (Others)	19
I.5. <u>C</u> -pure with Identity (1960)	21
I.6. Two-valued <u>C</u> -0 (1952)	24
I.7. The Calculus in <u>N</u> and <u>K</u>	26
I.8. Two-valued <u>E</u> -Pure	29
II. Equivalential Calculus with Variable Functors	30
II.1. Reduction in <u>E</u> - <u>μ</u> - <u>p</u>	35
II.2. Parthenogenesis of <u>C</u> <u>μ</u> <u>μ</u> <u>μ</u> <u>μ</u>	37
III. The Detachment Functor and its Combinatory Analogues	39
III.1. The theory of Deduction in Combinatory Logic (1956)	47
III.2. The System B C I (1956)	55
III.3. Single-Axiom B C K	57
III.4. A Combinatory Base without C-Positive Analogue	59
III.5. Implicational Nonsense	61

² Editor's note: This 'p.' as well page numbers for the table of contents are added by hand in the original manuscript.

³ Editor's note: No such introduction by Prior has ever been found.

IV.	Equational Logic and Abelian Groups	66
	IV.1. A Model of \underline{C} -Classical in \underline{C} -Positive (1956)	77
	IV.2. Equational Miscellany	83
	IV.3. \underline{K} - \underline{N} Equational	86
	IV.4. Abelian Groups	89
V.	Syllogistic Logic	91
	V.1. The Figures and Moods of the n-term Aristotelian Syllogism (1953)	95
	V.2. Terminal Functors Permissible with Syllogism (1957)	106
VI.	Modal Logic with Variable Functors and the Contingent Constant ‘Everything that is the Case’	109
	VI.1. The Two Systems $(\underline{C}, \underline{\Gamma}, 0, \underline{\delta}, \underline{p})$ and $(\underline{C}, \underline{\Gamma}, 0, \underline{n}, \underline{\delta}, \underline{p})^4$	123
	VI.2. Notes on my Modal System $(\underline{C}, \underline{\Gamma}, 0, \underline{n}, \underline{\delta}, \underline{p})$ (1953)	130
VII.	Pure Strict Implication	136
	VII.1. The Three-Valued Conjecture Refuted	154
	VII.2. First Deductions from Lemmon-style Base	160
	VII.3. Later Deductions from Lemmon-style Base	162
	VII.4. Miscellaneous Deductions	164
	VII.5. Sketch Decision Procedure	166

⁴ Editor’s note: In modern symbols $(\supset, \square, 0, \delta, p)$ and $(\supset, \square, 0, n, \delta, p)$.

VII.6. Single-Axiom C5	171
VII.7. First Survey of C5	172
VII.8. Second Survey of C5	182
VII.9. Supplementary Deduction and Matrices	189
VII. Appendix. The Łukasiewicz's Reduction of Bivalent C-Pure	191
VIII. Negation and Possible Worlds	193
VIII.1. Negation without the Law of Contradiction	207
